- Scales to millions of users with industry-pioneering Identity-Based Encryption (IBE) technology with stateless key management and HSM integration for superior security, while maintaining low operating costs for high ROI.

- Enables encryption without retaining messages or keys, a unique privacy feature among email encryption solutions.

- Adds simple-to-use encryption buttons to Outlook and desktop office applications, enabling fast adoption and high usage rate of end-to-end email encryption by an organization.

- SecureMail mobile app for Android and iOS now enables users to preview, attach and protect most types of attachments to a secure message, access files from cloud storage apps such as iCloud, OneDrive, Google Drive and Box, and receive email notifications on smart watches.

- Features a range of add-on modules to support most enterprise use cases including file encryption for secure collaboration, eDiscovery, application integrations, statements edition, and integration with leading anti-virus and DLP solutions.
